

Mixed Integer Linear Programming

Some x 's are integers where some are continuous variables.

Note that $LP \in P$ but ILP can be used to solve $NP - Complete$ problems so the integer constraints makes problem significantly different

Vertex Cover as Binary ILP (Integer Linear Programming)

Given a graph $G = (V, E)$ find $\min |V'|$, $V' \subset V$ where V' covers all the edges.

$$x_i = 1 \leftrightarrow i \in V' \text{ else } 0$$

$$\min \sum x_i$$

$$\text{s.t. } x_i + x_j \geq 1 (\{i, j\} \in E)$$

$$\forall i (i \in V) 0 \leq x_i \leq 1$$

$$\forall i (i \in V) x_i \text{ integer}$$
